Elijah Tucker

703-899-2802 — AuroraMail942@gmail.com
linkedin.com/in/elijah-tucker-0aa241290 — github.com/Ectucker06 — ectucker06.github.io/porfolio/

Technical Skills

- **Programming:** Python, Java, C++, JavaScript
- **Frameworks & Technologies:** React, FastAPI, LangGraph, REST APIs, MySQL, Supabase, Streamlit
- **Developer Tools:** Git/GitHub, VS Code, Bruno, Grafana, Cursor, Unity, Adobe Illustrator

Education

North Carolina A&T State University — **Greensboro, NC**
B.S. in Computer Science — *August 2023 – May 2027*

- **Relevant Coursework:** Data Structures, Analysis of Algorithms, Operating Systems, Software Engineering, AI & Machine Learning, Computer Architecture, Networked Computer Systems
- **Activities:** Association for Computing Machinery (ACM), Jazz Ensemble Pianist, Hackathon Participant

Experience

MetLife — *Cary, NC*
Junior Software Engineer Intern – Group Disability Technology — *June 1, 2026 – August 7, 2026*

- Designed and developed the Claims Communication Tracker (CCT), a working prototype that consolidated claim and communication data from multiple enterprise platforms into a unified experience.
- Built and integrated Agentic AI workflows using LangGraph and FastAPI to retrieve, coordinate, and validate information across enterprise claims services.
- Tested live API and agent integrations using Bruno, troubleshooting failures and validating claim data across multiple stages of the workflow; used Grafana to support monitoring and investigation.
- Developed and refined a React interface presenting claim activity, timestamps, communications, and available documents in a consistent MetLife-aligned user experience.

Environmental Protection Agency (EPA) — *Durham, NC*
Intern — *March 2023*

- Assisted in data collection, analysis, and visualization to support environmental research and program initiatives.
- Organized and communicated environmental data across an 11-member team using Pandas and supported reports, presentations, and research.

Projects

AI Medical Translator Web App – Medtronic Hackathon — *Nov 2025*
Supabase, JavaScript, OpenAI API, GitHub

- Designed the UI/UX and implemented secure authentication and temporary user-session storage using Supabase.
- Debugged chatbot and API integration points, improving runtime stability and reliability during the live demonstration.

KernelForge – GPU Kernel Compiler — *August 2026*
Python, PyTorch, Triton, JavaScript, REST APIs, pytest

- Collaborated on a compiler that generates Triton GPU kernels from mathematical expressions.
- Built a PyTorch CPU reference evaluator and REST API supporting single- and multi-output expressions, with automated tests.
- Integrated reference results into the web UI, added error handling, and visualized Triton versus PyTorch benchmark data.

African American History Website (AfroPix) — *Feb 2025*
Python, Streamlit, Adobe Illustrator

- Built an interactive multi-page Streamlit application highlighting underrepresented Black historical narratives.
- Created the project's visual identity and delivered a live pitch/demo to UNC sponsors during a 5-hour hackathon.
